

McAfee Total Protection

Reduce the Complexity of Managing Security

McAfee®

Computer security has changed dramatically since the first computer virus emerged 25 years ago. It's now far more complex and time-consuming. Viruses have been joined by a constant stream of worms, Trojans, bots, hackers, vulnerability exploits, identity thieves, and other attacks that threaten your entire network. And as networks expand to include remote and mobile users, the potential for gaping holes in your security becomes greater.

Simply adding new standalone products to combat new threats adds a new layer of complexity and inefficiency with every deployment.

Fortunately, McAfee® has the remedy. We took proven McAfee technology and built it into the industry's first integrated security solution that is effective, comprehensive, practical, and proven: McAfee Total Protection.

McAfee Total Protection

Security: More Complex and Challenging Than Ever

A hand is visible on the right side of the image, pointing towards a whiteboard. The whiteboard contains a list of items, including '1. SF SALES', '2. ADVERT SALES', and '3. CHANNEL TEAMS'. The text is slightly blurred, suggesting a focus on the foreground text.

Comprehensive Security That Stops Complex Threats and Mitigates Risk

McAfee Total Protection includes anti-virus, anti-spyware, anti-spam, desktop firewall, host intrusion prevention, and network access control—all integrated and managed with a single console. We engineered McAfee Total Protection from the ground up to be effective, comprehensive, and flexible. Key features include:

- One management console, one set of security updates, and one point of contact for technical support
- Comprehensive integrated protection against complex threats—both known and unknown—to block attacks and prevent disruptions
- Flexible and scalable, with a foundation for the future based on a unified agent strategy

Robust Protection, Uncompromised Integration

At McAfee, our technology has earned the respect of leading analysts and has won numerous awards. Our global network of hundreds of security experts is on duty around the clock to monitor threats, assess risks, and take any necessary action to keep you informed and protected.

These dedicated experts make McAfee AVERT® Labs one of the top-ranked worldwide security research organizations.

McAfee Total Protection gives you the comfort and confidence that comes from proven technology, plus 24/7 support and a network of trusted partners who offer value-added services to help customize your security solution.

Built for Today—and Tomorrow

Investing in McAfee Total Protection means you won't have to start from scratch when new, previously unknown, threats appear. It's built upon a platform that can evolve as the threat environment evolves. So not only will your systems be protected, but your security investment will be, too.

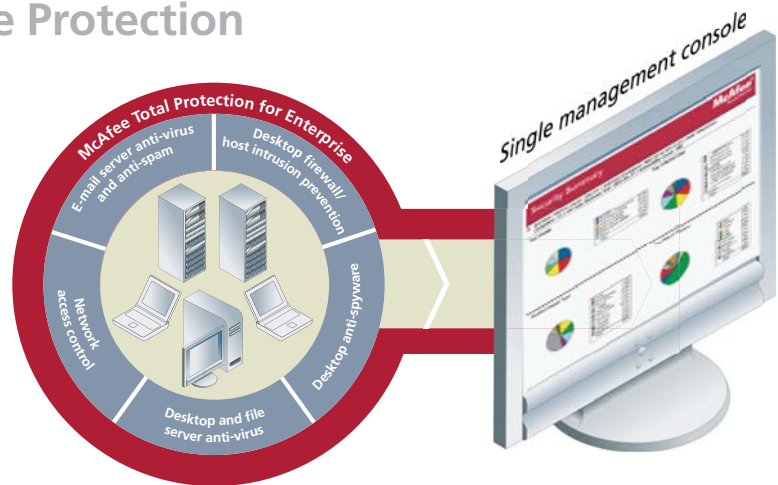

Total Protection for Any Business

Because McAfee realizes no two businesses are alike—from the smallest business to the largest enterprise—we offer several versions of McAfee Total Protection. Each is an integrated and comprehensive solution with features tailored to meet specific security and business requirements.

Consolidating software to streamline security can certainly save time, money, and resources. But those benefits are worth little if you can't trust the technology behind it.

McAfee Total Protection for Enterprise One Integrated Solution, One Console, Proven Comprehensive Protection

The proper level of security can be difficult to determine. You weigh the risks and consequences against costs, resources, and time. And the proper level of security constantly changes. By adopting a more flexible and integrated approach to enterprise security—through one comprehensive solution that can adapt as the threat environment evolves—you can more easily manage your dynamic IT environment.

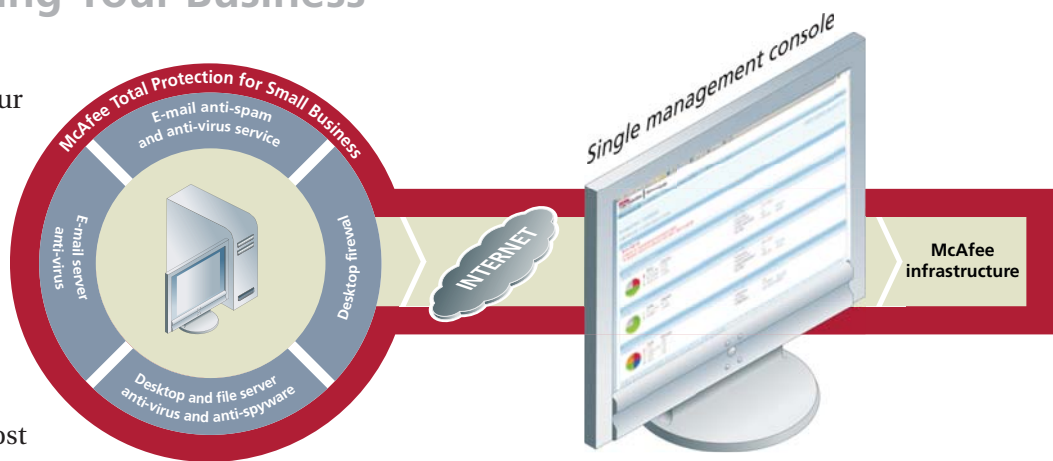

- A single console lets you deploy, manage, and report across desktops, laptops, servers, and remote systems
- Comprehensive protection guards against bots, viruses, worms, Trojans, spyware, adware, keystroke loggers, and targeted hacker attacks
- Signature- and behavioral-based host intrusion protection secures desktops against zero-day and known threats
- Extensible architecture protects and leverages your investment in existing infrastructure
- Advanced e-mail protection stops spam and viruses
- Network access control enforces corporate security policy on systems, and guards corporate assets against non-compliant systems (Advanced version only)

McAfee Total Protection for Small Business

The Always-On, Always Up-to-Date Single Solution For Protecting Your Business

Protecting all of your systems all of the time is challenging in today's ever-changing threat environment. Are you sure you have all the most current protection in place? That's why we developed McAfee Total Protection for Small Business. It offers comprehensive security that's always on and always up to date—and the confidence that you are completely protected. And it's delivered via the Web, so it's simple to manage and you can install the most comprehensive protection quickly and conveniently.

- Ensure automatic protection and security updates for every user
- Get comprehensive protection against viruses, spyware, spam, and phishing—plus desktop firewall technology—in one integrated solution
- Use centralized management to view the big picture of your overall security status, details on individual users, and management reports—all hosted on McAfee systems
- Install quickly and easily by sending a link to users at any location
- Get the latest technology with no equipment to purchase and no IT security specialists to hire

Find the McAfee Total Protection That's Right for Your Business.
